

Global Medical Data, Inc. offers peace of mind.

GMD protects your patient notes and records from loss or destruction due to man-made and natural disasters by archiving your critical patient data on our geo-diverse servers.

GMD's medical transcription service is HIPAA compliant and exceeds your needs for backup and disaster recovery. We offer our clients the use of our resources to help reduce costs, improve staff productivity, and achieve business objectives.

The state-of-the-art network of servers shown in Figure 1 are part of GMD's an advanced web site, which provides private portals where clients manage accurate and swift service in a user friendly environment for solo physician practices, large group practices, and hospitals.

The Internet-based workflow application deployed by GMD for medical transcription manages the full life-cycle of documents beginning with the time they enter the system as dictated audio files. We then distribute the audio files to the transcriptionists and editors, and finally deliver documents back to medical professionals as Microsoft Word® files. GMD's file routing system guarantees optimal efficiencies, reducing turnaround times and reducing your costs compared to traditional transcription methods.

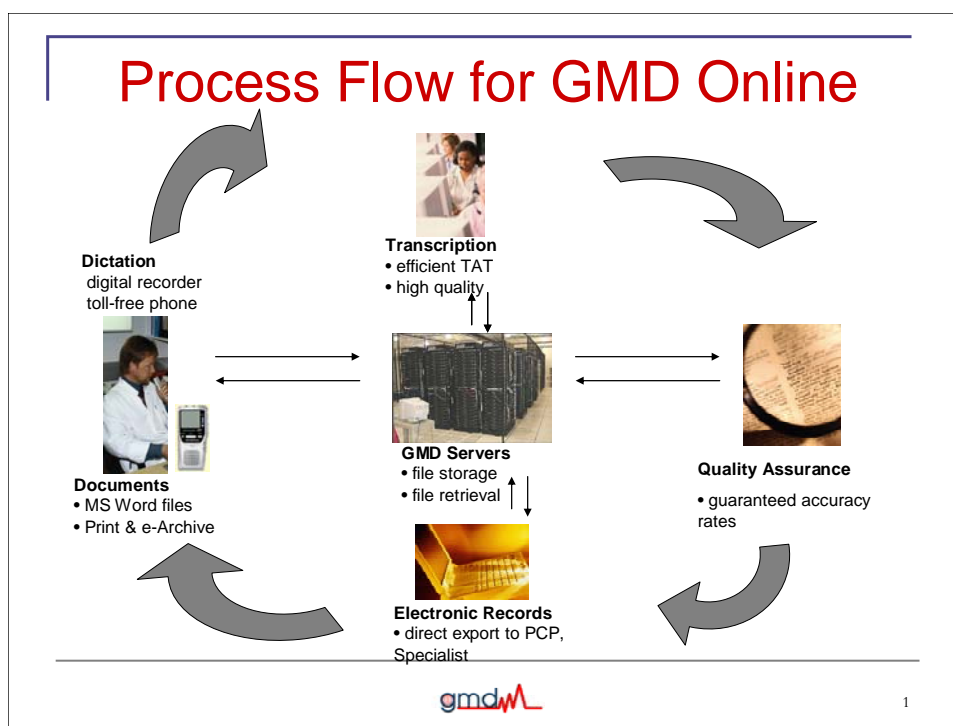

Figure 1.

GMD's state-of-the-art "Dictation to e-Document" application includes:

- All modes of Digital Dictation (**digital recorder**, toll-free, and other systems)
- Online Workflow Management system providing optimal control
- Online Record Maintenance for Electronic Patient Notes/Charts
- Migration to Electronic Health Records

GMD provides complete HIPAA compliance and Secure Data Transfer on its fault tolerant and geo-diverse servers.

We use our special blend of information communications technology and professional staff (See Figure 2.) to help hospitals and physician practices achieve their business objectives by reducing cost, improving turn around time, improving workflow, meeting industry and government compliance requirements. We have raised the level of service in the industry by combining speed, accuracy, and security - offered at competitive prices.
